

CHANGXING SHANLI CHEMICAL MATERIALS CO., LTD

Company Profile

Changxing Shanli Chemical Materials Co.,Ltd is an international modern and comprehensive high-tech enterprise specialized research and manufacture of high-end international carbon molecular sieve (CMS) products, which is famous at home and abroad.

Shanli owns scientific research, the production, import and export, technical service, project investment as a whole, and vigorously promotes diversified development, integrated business enterprise strategy, focuses on the development of new energy, new materials, new equipment. The main products is CMS and its application equipment, carbon Materials, composite, molecular sieve, catalyst and other kinds of new materials.

Since 1984, Shanli embarked on the road of carbon molecular sieve. Shanli Enterprise is China's earliest and the only enterprise who researches and develops Carbon Molecular Sieve production technologies, as well as one of the earliest who researches and produce Carbon Molecular Sieve products.

Shanli had created several large-scale modern factories in Changxing, Anhui, Shandong and other places. It has several subsidiary companies, holding companies, and whole supply chain system.

Shanli has the international leading technology, first-class factories and equipments, advanced laboratories and the whole detection means. Besides, It has modern enterprise management mode and excellent management team. Under the distinguished experts's leadership, Shanli had made up a professional R&D team.

Shanli's product quality has fully meet even beyond the world industry products high quality standards, at home and abroad we have a large stable customer. Nowadays Shanli has become a industry leader of CMS, "the good faith foothold, the innovation sends far" is Shanli development purposes as always.

Enterprise Culture

base on the sincerity, creation with science, survive by the quality, regard the customer as God.

To become the leading enterprise of international carbon molecular sieve industry.

CHANGXING SHANLI CHEMICAL MATERIALS CO., LTD

Products and Services

Carbon molecular sieve is a new type of carbon adsorbent for high-purity nitrogen equipment. It's mainly used in metal heat treatment, food, fruit preservation, oil extraction, pipeline flushing, car tires security temperament and many other industries. At present Shanli owns many types of CMS products, provide research and development, production, adding, replacement, debugging system and other services.
